

## ABSTRACT

Antisense compounds, compositions and methods are  
5 provided for modulating the expression of BCL2-associated X  
protein. The compositions comprise antisense compounds,  
particularly antisense oligonucleotides, targeted to nucleic  
acids encoding BCL2-associated X protein. Methods of using  
these compounds for modulation of BCL2-associated X protein  
10 expression and for treatment of diseases associated with  
expression of BCL2-associated X protein are provided.
